Changing Batteries in Smoke and Carbon Monoxide Detectors

The North Maine Fire Protection District recommends that you change the batteries in your smoke detectors and carbon monoxide alarms twice per year. A good way to remember is to change your batteries every time you change your clocks.

The North Maine Fire Protection District is happy to change the batteries in your smoke detectors and carbon monoxide alarms that use 9 volt or double AA batteries. We will provide the batteries if you don't have them also at no cost to you.
